INTRODUCTION TO *RELEASE 90 NOTES*

This edition of *Release 90 Notes* describes the Release 90 Drivers for Microsoft® Windows® and provides information applicable to all NVIDIA® drivers. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

Structure of the Document

This document is organized in the following sections:

- [“Release 90 Driver Issues” on page 2](#) gives a summary of
 - Issues that have been resolved in this version.
 - Issues that are open in this version
 - Known limitations of the driver
- [“The Release 90 Driver” on page 23](#) describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.
- [“NVIDIA Driver History” on page 29](#) describes the new features included in the Release 90 driver as well as information on previous driver releases.
- [“Mode Support for Windows” on page 55](#)

Changes in this Edition

This edition of *Release 90 Notes* includes information about version 91.36 of the Release 90 driver. It discusses changes made to the driver since version 84.26. These changes are discussed beginning with the chapter [“Release 90 Driver Issues” on page 2](#).

CHAPTER

2

RELEASE 90 DRIVER ISSUES

This chapter describes open issues for version 91.36, and resolved issues and driver enhancements for versions of the Release 90 driver up to version 91.36. The chapter contains these sections:

- “Issues Resolved in Version 91.36” on page 3
- “Open Issues in Version 91.36” on page 5
- “Known Product Limitations” on page 9

Issues Resolved in Version 91.36

The following are changes made and issues resolved since driver version 84.26:

- NVIDIA Ex Support

This is a performance optimization for nForce 590 motherboards. This optimization can be enabled through a BIOS setting on the nForce 590 motherboard. The GPU Ex setting should only be enabled with Optimized NVIDIA Ex ForceWare Release 90 drivers.

Single-GPU Issues Resolved

- Display anomaly occurs while running Inventor 11 on multiple display configuration.
- Added a profile for PolyWorks.
- NVIDIA Quadro FX Family: Corrupted fringe plots occur with MSC Patran.
- NVIDIA Quadro FX Family: There is choppy movement with the model position graph editor in Lightwave 8.5 Layout
- NVIDIA Quadro FX Family: Grid position in 3ds max 8 changes when resizing the viewport.
- NVIDIA Quadro FX 4500/5500: 3D windows are mismatched when spanning across two 30" Dell monitors.
- NVIDIA Quadro FX 4500: Images flash in Dassault Catia V5R16 due to issue with OpenGL threading.
- NVIDIA Quadro FX 4500: Autodesk Inventor SlopeScaleDepthBias setting does not work with Direct3D mode.

Open Issues in Version 91.36

As with every released driver, version 91.36 of the Release 90 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others will have workaround solutions.

They are listed in the following sections:

- “NVIDIA Recommendations” on page 5
- “NVIDIA Issues—Single GPU” on page 6
- “NVIDIA Issues—Single GPU, Windows XP x64” on page 8
- “NVIDIA Issues—SLI Mode” on page 8

NVIDIA Recommendations

- Single display modes such as TV only, DFP/LCD only or CRT only provide the best performance and quality from Windows Media Center Edition.

Dual display modes such Dualview and nView Clone and Span modes are not recommended.

- When using the trial version of WinDVD 6 from InterVideo.com, you may experience TV or DVD playback problems in Windows Media Center if you change resolutions during video playback. This is most often seen when switching from windowed to full screen mode.

This problem does not occur with the latest full OEM versions of WinDVD or with other Windows Media Center qualified DVD decoders.

- If you perform a clean driver installation (no previous NVIDIA drivers installed), **you must reboot your computer**. If you do not reboot, the predefined application profiles will not be activated and you may experience application stability problems.

NVIDIA Issues—Single GPU

This section includes issues that occur under the Windows XP or Windows 2000:

- NVIDIA Control Panel->Workstation-> Frame Sync: After removing the Server/Client settings and then restarting the system, the Server/Client settings remain.
- NVIDIA Control Panel->Workstation-> Frame Sync: Two Servers can appear on the same system after switching between dual and single display modes.
- NVIDIA Control Panel->Workstation-> Frame Sync: The View Status Page does not detect which is the first and which is the second display attached to the GPU.
- NVIDIA Control Panel->Workstation-> Frame Sync: Server/Client settings are lost after restarting the system.
- NVIDIA Quadro G-Sync, NVIDIA Control Panel: The Framesync server machine hangs if the signal generator is switched on after setting the server.
- Memory clocks displayed do not reflect DDR multiplier.
The memory clocks themselves are running at the correct speeds.
- The NVIDIA Control Panel-> Workstation-> Frame Sync-> View system topology page is corrupted after the page is redrawn several times.
- The NVIDIA Control Panel-> Workstation-> Frame Sync page crashes after disabling Dualview mode or when setting the resolution to 1280x1024.
- NVIDIA Control Panel Category Pages: Foreign language text exceeds the boundary of category windows.
- There may be intermittent application compatibility issues with dual core CPUs.

If you experience this issue, you can work around it by toggling off multi-thread optimizations using the following instructions:

- 1 Launch **regedit** and determine the current primary display card by looking in

HKey_Local_Machine\Hardware\DeviceMap\Video

and note the GUID (global unique identifier assigned by Windows), which is the long string in brackets { } at the end of the entry

"\device\video0".

2 Look in

HKey_Local_Machine\SYSTEM\CurrentControlSet\Control\Video\{GUID}\0000

where {GUID} is the number derived from the previous step.

3 Open the "0000" directory and create a new DWORD called **OpenGL_ThreadControl** and give it a value of 2.

This will disable multithreading in the driver for all OpenGL applications.

4 If you want to disable driver multithreading for all Direct3D applications—

In the same "0000" directory, create a new DWORD called **WTD_EXECMODEL** and give it a value of 0.

- All GPUs: When adding Custom Resolutions, the user is not allowed to select the "monitor scaling" option.
- Windows XP: The system crashes after enabling NVKeystone with antialiasing enabled.
- Video color-space range for DVI-only¹ outputs is erroneously set to standard mode (16-235) instead of extended mode (0-255).

A new detection feature to apply Standard CSC mode to TV outputs (including NTSC, PAL, 480i, and 576i), included DVI-only outputs by mistake.

Note: *The driver correctly applies extended mode to analog outputs, and standard mode to TV outputs (including NTSC, PAL, 480i, and 576i).*

A future driver release will correct this and apply the extended-mode color space to DVI-only outputs.

You can work around this issue by forcing either standard or extended mode as follows:

1 Launch **regedit** and determine the current primary display card by looking in

HKey_Local_Machine\Hardware\DeviceMap\Video

and note the GUID (global unique identifier assigned by Windows), which is the long string in brackets { } at the end of the entry

"\device\video0".

2 Look in

1. "DVI-only" means only one display is connected, and it is to the DVI output.

HKey_Local_Machine\SYSTEM\CurrentControlSet\Control\Video\{GUID}\0000

where {GUID} is the number derived from the previous step.

- 3 Open the "0000" directory and create a new DWORD called **VMRCCCSStatus** and give it a value of
 - 0x3** - to force use of the standard YUV range of 16-235
 - 0x1** - to force use of the extended YUV range of 0-255
- NVIDIA Quadro FX 4500, Windows Media Center Edition 2005: After changing the refresh rate, the Yes button does not work in the confirmation dialog box.
 - NVIDIA Quadro FX 4500, NVIDIA Control Panel: When enabling nView Clone mode for the first time, each monitor is set to a different resolution.
 - NVIDIA Quadro G-Sync, NVIDIA Control Panel: The Framesync server machine hangs if the signal generator is switched on after setting the server.

NVIDIA Issues—Single GPU, Windows XP x64

The following issues occur under the Windows XP Professional x64 and Windows Server 2003 x64 OS:

- NVIDIA Quadro FX 4500 X2, Window XP x64: The Classic NVIDIA Control Panel->Edge Blending page is missing.

NVIDIA Issues—SLI Mode

This section includes SLI technology related issues that occur under the Windows XP, Windows 2000, or Windows Media Center Edition OS:

- NVIDIA Quadro FX 4500, SLI System: With two displays connected, in the NVIDIA Control Panel-> 3D Settings-> Set SLI Configuration page, the "Select the display to view SLI rendered content on" combo box sometimes shows more than two displays.
- NVIDIA Quadro FX 5500, SLI System: With SLI mode enabled, GPU load balancing does not work with AutoCAD 2007.

Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

SLI Connector Requirement on NVIDIA Quadro SLI Cards

The SLI connector that links two SLI cards is needed for proper SLI operation. However, the connector can be removed if you do not intend to enable SLI mode. If you remove the connector, then you must make sure that SLI mode is disabled from the NVIDIA control panel. Enabling SLI mode without the SLI connector installed will result in video corruption.

VIA and ATI AGP 3.0 Chipsets

- **Problem**

The use of AGP-protocol cycles for coherent access to regular system memory results in data corruption on systems based on VIA and ATI AGP 3.0-compatible chipsets.

AGP-protocol cycles to the AGP aperture are not affected.

- **Workaround**

To correct the data corruption problem, the Release 75 driver exclusively uses PCI-protocol cycles to access regular system memory when it detects a VIA or ATI AGP 3.0-compatible chipset.

DVD Playback Issues with Dual NVIDIA Quadro NVS Cards

With both AGP and PCI NVIDIA Quadro NVS cards installed in the system, when attempting to play DVDs in full-screen mode on the display connected to the PCI card, the screen is blank.

This is not an NVIDIA bug, but rather a problem with older point releases of PowerDVD and WinDVD.

PowerDVD 5.0 Does Not Display Correctly in nView Span Mode

With nView Horizontal Span mode enabled, when the PowerDVD 5.0 playback window is dragged to the second display and then stretched to fill the display, the right area of the display is corrupted.

This is not an NVIDIA bug, but a problem with PowerDVD.

DirectX Fails When Detaching/Reattaching Displays in Dualview Mode

This problem can be duplicated as follows:

- 1 Enable both displays in Dualview mode.
- 2 Detach monitor 2 and apply settings.
- 3 Reattach monitor 2 and apply settings.
DirectX runtime fails on monitor 1.

This is not an NVIDIA bug, but a limitation in the operating system where DirectX does not enumerate the second device. DirectX can be restored to both displays by rebooting the system

OpenGL Viewport Scaling Problem in Horizontal Span Mode

With nView Horizontal Span mode enabled, when opening an OpenGL model in a viewport, the model image is scaled too large to fit in the viewport. The problem occurs with such applications as Maya 5.0 and 3D Studio MAX 4.26.

This is not an NVIDIA bug, but a limitation in the application's ability to properly maintain the aspect ratio in Horizontal Span mode.

Driver Reports 256 MB Memory on NVIDIA Quadro FX 330 Cards

- **Problem**

When a 64 MB NVIDIA Quadro FX 330 card is installed, the driver reports that the card needs 256 MB, causing 256 MB of address space to be consumed.

- **Explanation**

This is not a bug but a product limitation.

The NVIDIA Quadro FX 330 GPU has some limitations that prevent the card from addressing less than 256 MB of system memory.

Video Playback in nView Clone and Span Modes

- **Problem**

With nView Clone or Span mode enabled, video playback appears on only one display under the following conditions:

- Under nView Clone mode, when fullscreen video mirror is not used.

- Under nView Span mode, when fullscreen video mirror is not used and the video is positioned to span across both monitors.

- **Explanation**

With applications that render using the hardware overlay—such as DirectX applications—the default driver behavior for Release 60 is to enable the hardware overlay when nView Clone or Span mode is enabled.

Because the driver supports only one hardware overlay, the video appears on only one display.

Monitor Ordering in the Windows Settings Page

Monitor Ordering on a Single GPU

- **Issue**

The monitor order in the Display Properties Settings page is not consistently matched with the connectors on the graphics card.

- **Explanation**

The driver does not distinguish connector positions, but instead distinguishes the display type, and consequently assigns monitor numbers according to the display type and not according to the connector.

Monitor Ordering on a Multiple GPU System

- **Issue**

When four monitors are connected to a system with multiple PCI GPUs, such as a NVIDIA Quadro NVS 400 graphics card, and enabled in Dualview or Multiview mode, many customers expect the monitor ordering in the Display Properties Settings page to conform to the following:

| Connector Position | Monitor Number |
|------------------------|----------------|
| Primary GPU—Output 1 | 1 |
| Primary GPU—Output 2 | 2 |
| Secondary GPU—Output 1 | 3 |
| Secondary GPU—Output 2 | 4 |

The monitor ordering, in fact, does not conform to this scheme.

- **Explanation**

The monitor ordering is not controlled by the driver, but rather by the Windows OS method of enumerating PCI devices. The Windows enumeration results in the following monitor numbering:

| Connector Position | Monitor Number |
|------------------------|----------------|
| Primary GPU—Output 1 | 1 |
| Secondary GPU—Output 1 | 2 |
| Primary GPU—Output 2 | 3 |
| Secondary GPU—Output 2 | 4 |

Considerations for nView Span Modes: Outputs from the same GPUs are grouped together in nView Span modes, resulting in the desktop spanning across monitors 1 and 3, or across 2 and 4.

DirectX Applications Run Only on Single Display Even in Multiview Mode

- **Problem**

When running DirectX applications in fullscreen mode on an NVIDIA Multiview system, the application appears on only one display instead of all the displays.

A Multiview system consists of a NVIDIA Quadro NVS series graphics card with multiple monitors connected and multiview mode enabled.

- **Explanation**

The problem occurs only with DirectX /Direct3D applications that use full-screen exclusive mode. In order to support these applications, the driver must switch to single display mode and blank out the other displays.

In scenarios that require multiview functionality—such as when using screen savers—NVIDIA recommends using non-DirectX/Direct3D applications.

Applying Workstation Application Profiles

- **Background**

The workstation application profiles are software settings used by the NVIDIA Display Drivers to provide optimum performance when using a selected application. The profile also works around known application issues and bugs.

If there is an available setting for an application, it should be used, otherwise incorrect behavior or reduced performance is likely to occur.

- **Issues**

Configuration changes require the application to restart.

Running applications do not receive notification of configuration changes, Therefore, if you change the configuration while the application is running, you must exit and restart the application for the configuration changes to take effect.

Advanced Timing Adjustment Limitations

- **Problem**

The Advanced Timing page—accessed from the NVIDIA Display Properties Change Resolution page—is not available for some cards using the DVI connector.

- **Explanation**

DVI timing adjustment is supported for NV3x-based cards only if they have an external TMDS, such as the SiliconImage 164.

If the card uses the internal TMDS, then the page is not accessible. However, cards with an internal TMDS can support refresh rates less than 60 Hz in this driver.

No Antialiasing of 3DMark03 Image Quality Screen Captures

- **Problem**

After enabling antialiasing from the NVIDIA Properties page, 3DMark03 screen captures—obtained using the application’s screen capture function—might not be antialiased.

- **Explanation**

This is not an NVIDIA bug, but rather a result of different methods used to render antialiased images.

Depending on a combination of factors, the driver may take advantage of the NVIDIA hardware’s ability to bypass the front buffer while rendering an antialiased image. In this case, the front buffer does not contain antialiased data, so if an application takes data from the front buffer—as is the case with 3DMark03’s Image Quality screen captures—then the resulting image is not antialiased.

To accommodate applications that request use of the front buffer, the NVIDIA software can provide the antialiased data in a buffer to the application. Since this negates the advantages of the NVIDIA hardware capability, this support is enabled only when antialiasing is enabled within the application, and not from the NVIDIA control panel.

In all cases when antialiasing is enabled, screen images as well as screen captures obtained using the Print Screen key are always antialiased.

Hide Modes Check Box Cannot be Cleared

- **Background**

One of the NVIDIA display property page dialog boxes contains the check box labelled “Hide modes that this monitor cannot display”. It is checked by default, indicating that only the refresh rates supported by the monitor are listed in the refresh rate drop down list.

The check box appears in the Device Adjustments->Monitor Settings page.

- **Problem**

If you clear the check box, click **Apply**, and then close the dialog box, the check box is still checked when the page is re-opened.

- **Explanation**

This function is no longer controlled by the NVIDIA driver, but has not been removed from the control panel in order to maintain consistency with driver designs that are currently being shipped to OEMs.

Windows XP/2000 Issue with Settings Tab Monitor Positioning

- **Problem**

In the Windows **Display Properties** > **Settings** tab, the secondary monitors cannot be positioned directly above monitor #1 without snapping horizontally to a position diagonal to monitor #1.

- **When the Problem Occurs**

The problem occurs when four monitors are connected to the graphics adapter card, but only two of them are enabled.

- **Cause and Workaround**

This is a Microsoft—not an NVIDIA—bug, and there is no workaround to correct the positioning of the monitor icons. However, the actual positioning of the displays on the desktop can be corrected using the nView Desktop Manager window as follows:

- 1 Under the Tools tab in the Desktop Manager windows, make sure Automatically Align Displays is checked.
- 2 In the Settings tab, position the appropriate monitor icon above monitor #1, then click **Apply**.

The mouse cursor movement between monitor desktops will correspond to a vertical orientation of the monitors, even though the monitor icons in the Settings tab are diagonal to each other.

Note: This will be the case even if the monitor icons are deliberately positioned diagonal to each other.

Gigabyte GA-6BX Motherboard

This motherboard uses a Linfinity regulator on the 3.3-V rail that is rated to only 5 A—less than the AGP specification, which requires 6 A. When diagnostics or applications are running, the temperature of the regulator rises, causing the voltage to the NVIDIA chip to drop as low as 2.2 V. Under these circumstances, the regulator cannot supply the current on the 3.3-V rail that the NVIDIA chip requires.

This problem does not occur when the graphics board has a switching regulator or when an external power supply is connected to the 3.3-V rail.

Windows Media Player Hangs Playing MPEG Files

On systems using the InterVideo WinDVD player (including ones that don't contain NVIDIA components), Windows Media Player 6.4 halts if the slider is adjusted while an MPEG clip is playing. The problem also occurs if Active Movie or the Movie Player on the Windows 98 CD is used instead of Media Player 6.4.

There are two ways to work around this problem:

- **Under Display Properties > Settings > Advanced... > Performance, set Graphics Hardware acceleration to None.**
- **Uninstall the WinDVD player.**

This is not an NVIDIA bug.

Antialiasing Problems With Certain Applications

Antialiasing in the NVIDIA Direct3D driver requires each new frame to be rendered from scratch. This requirement adversely affects applications that render only that portion of the content that has changed since the last frame. A common symptom of this problem is geometric structures that incorrectly disappear and re-appear as the scene shifts.

VIA KX133 and 694X Chipsets With AGP 2X

On Athlon motherboards with the VIA KX133 or 694X chipset, such the ASUS K7V motherboard, NVIDIA drivers default to AGP 2X mode to work around insufficient drive strength on one of the signals.

- **To force NVIDIA drivers to use AGP 4X transfers, the registry key is**

```
HKLM\System\CurrentControlSet\Services\nv4\DeviceN\ EnableVia4X
```

where the N in DeviceN is the system-determined number indicating the current NVIDIA device. This number is normally 0.

These registry keys should only be used if there is reason to believe that the motherboard has the appropriate drive strength.

Irongate Chipsets With AGP 1X

AGP 1X transfers are used on Athlon motherboards with the Irongate chipset to work around a problem with the signal integrity of the chipset.

Poor Quality S-Video Output on Some TVs

NVIDIA drivers differentiate an S-video TV from a composite TV by searching for 75-Ohm loads on the chrominance and luminance lines. If the driver detects only one such load, it assumes that it has a composite TV and drives both chroma and luma onto that line. This approach allows both types of TV to display in color.

Unfortunately, some S-video TVs do not apply the correct load to both lines, causing the driver to detect an S-video TV as a composite. The driver, in turn, sends the lower quality signal to the S-video TV. To work around this problem, use the Control Panel to override the “Auto-select” feature. This can be done following these steps:

- 1 In the Settings tab of the Display Properties Control Panel, click Advanced.
- 2 In the nView tab, click Device Settings and click Select Output Device.
- 3 In the Device Selection tab, click the TV option.
- 4 Change the “Video output format” to S-video.

AGP and PCI-E Programs May Hang With AMD K7 and K8 Processors

- **Issue**

Microsoft® Windows® 2000 and Windows XP systems using AMD K7 and K8 processors can hang when an AGP or PCI-E program is used.

- **Root Cause**

There is a known problem with Microsoft® Windows® 2000 and Windows XP systems using AMD K7 and K8 CPUs that results in the Microsoft operating system allocating overlapping 4M cached pages with 4k write-combined pages. This condition results in undefined behavior and data corruption, and is explicitly disallowed by the AMD CPU manual.

This problem can affect any device driver in the system that allocates write-combined system memory, but is usually most easily reproduced with graphics drivers since graphics drivers generally make heavy use of write-combined system memory for performance reasons.

- **Resolution**

Microsoft has a knowledge base article on the issue, the text of which is unfortunately quite outdated. While the article only mentions Windows 2000, AGP, and K7, both the root cause and resolution also apply to Windows 2000 or WindowsXP, AGP or PCI-E, and AMD K7 or K8. The article can be found at <http://support.microsoft.com/?id=270715>.

The issue is resolved by applying an operating system registry key as described in the referenced article that instructs the Microsoft operating system to not use the 4M pages, thus avoiding the conflict.

The registry key is automatically applied by installation of the latest NVIDIA nForce platform driver package (including 4.57 SMBUS or later). It is imperative for the package to be installed or for the registry key to be applied before the NVIDIA graphics driver or any other device drivers are installed. The registry key takes effect only after an operating system reboot.

Desktop Manager Does Not Re-Center Logon Screen

On Windows NT 4.0, Windows 2000, and Windows XP multi-display systems that are set to nView Span mode, the Windows logon screen is centered on the extended desktop. This usually causes it to be split across two displays, which users may find annoying. Although users can normally use the Desktop

Manager to restrict a window's appearance to one display, security restrictions in the operating systems prevent this in the case of the logon screen.

Issues with Video Mirror–Windows XP/2000

Table 2.1 lists current known issues with NVIDIA Video Mirror functionality.

Table 2.1 Known Issues with Video Mirror

| Issues |
|--|
| Video Mirror is not yet implemented for applications using Video Port Extensions (VPE). |
| If Video Mirror is enabled but a full-screen display does not appear, one of the following problems may have occurred: |
| Video Mirror can only function when overlay is being used. The video player may not be able to create an overlay if another application is using the overlay, or the desktop display resolution is too high. You can lower the desktop resolution, pixel depth, or refresh rate. |
| Video Mirror requires some extra memory to run. Try closing other DirectX or OpenGL applications that may be running. |
| You may need to close and restart your video application for Video Mirror enabling or disabling to take effect. |
| Some video players that cannot detect the presence of Video Mirror stop playing if they are minimized or completely obscured by another window. For example, Media Player can exhibit this problem. |

Installation Instructions

Before You Begin

- If you do not have System Administrator access privileges, it is assumed that the appropriate person with System Administrator access in your organization will set up and install the NVIDIA graphics driver software on your computer.
- The installation process copies all necessary files for operation into the appropriate directories.
- The nView system files are copied to your **Windows\System** directory.
- nView Desktop Manager Profile files (*.tvp) are saved in the **Windows\Nview** directory.

Depending on the version of the NVIDIA driver previously installed, profiles may also be located in the **Documents and Settings\All Users\Application Data\nView_Profiles** directory.

- As part of the install process, an uninstall is registered in your system.
- Under Windows Me and Windows XP, the NVIDIA driver is installed in “Dualview mode” display. However, note that the second display is not activated by default, but must be enabled.
- Under Windows 2000, the NVIDIA Display Driver is installed in Span mode. See the instructions in the *ForceWare Graphics Drivers User’s Guide* for instructions on how to install nView DualView mode.

Preserving Settings Before Upgrading Your Software

Before uninstalling or installing software, you can preserve your nView Desktop Manager and/or NVIDIA Display settings by using the nView Desktop Manager Profiles features.

Note: Follow the steps below and/or refer to the *NVIDIA nView Desktop Manager User's Guide* for details. Under Windows XP/2000 and Windows NT 4.0, you must have, at least, **Power User** access privileges in order to create or save a profile. (Refer to Windows Help if you need an explanation of Power User access rights.)

Follow the steps below and/or refer to the *NVIDIA nView Desktop Manager User's Guide* for details.

- 1 Open the nView Desktop Manager Profiles page (Figure 4.1).
- 2 To preserve your current settings, you can use either the **Save** or the **New** option from the nView Desktop Manager Profiles page:
 - If you want to overwrite the currently loaded profile with your changed settings, use the **Save** option. Notice that a warning message indicates that you are about to overwrite the selected profile.
 - If you want to retain the currently loaded profile and want to save your changed settings to a new file, click the **New** option. Enter a name and description of the profile in the New Profile dialog box. For example, you can name this profile **My Settings**.
- 3 If you are an “advanced” user and want to customize certain settings in the saved profile, click **Advanced** << to expand the dialog box (Figure 4.2).
- 4 To customize the settings, you can select or clear any of the settings check boxes.
- 5 Click **Save** to return to the main Profiles page.

If you created a new profile, you will see the name of the newly created profile in the profiles list.

If you overwrote a current profile, the same profile name is retained in the list.

Note: nView Desktop Manager profile (. **tvp**) files are saved in the **Windows\ nView** directory. Depending on the version of the NVIDIA driver previously installed, profiles may also be saved in the **Documents and Settings\All Users\Application Data\ nView_Profiles** directory.
- 6 Now you can uninstall your current driver for a driver upgrade.
- 7 After you restart your computer following an NVIDIA new driver install, you can easily load the saved profile from the Profiles page of nView Desktop Manager.

About Using Saved Profiles in Another Computer

You can easily use any saved profile (.tvp file in the `Windows\nView` directory) from one computer and use it in another computer, if you want. You'll need to copy it to the `Windows\nView` directory of a computer that has the NVIDIA ForceWare graphics display driver, etc. installed properly. Then this profile can be loaded from another computer from the nView Desktop Manager Profiles page just as it can from your original computer.

Uninstalling the NVIDIA Display Driver Software

Note: It is highly recommended that you follow the steps in this section to completely uninstall the NVIDIA Display Driver software before updating to a new version of the software.

To uninstall the nView software, follow these steps:

- 1 From the Windows taskbar, click **Start > Settings > Control Panel** to open the Control Panel window.
- 2 Double-click the **Add/Remove Programs** item.
- 3 Click the **NVIDIA Display Driver** item from the list.
- 4 Click **Change/Remove**.
- 5 Click **Yes** to continue.

A prompt appears asking whether you want to delete all of the saved nView profiles.

- If you click **Yes**, all of the nView software and all of your saved profiles will be deleted.
- If you click **No**, the nView software is removed, but the profile files are saved in the `Windows\nView` directory on your hard disk.

Your system now restarts.

Installing the NVIDIA ForceWare Graphics Drivers

- 1** Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.
- 2** Click the driver download link.
The license agreement dialog box appears.
- 3** Click **Accept** if you accept the terms of the agreement, then either open the file or save the file to your PC and open it later.
Opening the EXE file launches the NVIDIA InstallShield Wizard.
- 4** Follow the instructions in the NVIDIA InstallShield Wizard to complete the installation.

NVIDIA Unified Compiler

As today's GPUs become more and more programmable they are entering a similar era to that of the CPU. For CPUs, it is common for developers to implement code paths specifically optimized for AMD or Intel (e.g MMX and 3DNow!). Programmable GPUs are no different. Because architectures vary, it makes sense that one common assembly language can't cover all the nuances of specific GPU micro-architectures. In fact, different code paths make different GPUs go faster. As a result with the GeForce FX architecture, NVIDIA has implemented a GPU-specific compiler that can be used to optimize application performance.

Display Driver Changes and New Features

- **Rotation support**
Added to Windows Me/9x.
- **Custom resolutions**

APPENDIX

MODE SUPPORT FOR WINDOWS

This chapter details the Windows modes supported by the Release 90 driver for NVIDIA products. It contains these sections:

- “General Mode Support Information” on page 54
- “Default Modes Supported by GPU” on page 55
- “Modes Supported by DACs and TV Encoders” on page 63

General Mode Support Information

The NVIDIA graphics driver includes a standard list of display modes that are supported by default. These modes are listed in the section “[Default Modes Supported by GPU](#)” on page 55.

The actual modes available depend on the capabilities of the display. In addition, the NVIDIA graphics driver has a “dynamic EDID detection” capability and will make available *additional* modes that are listed in the display EDID, provided the graphics hardware can support it.

The NVIDIA graphics driver also supports the high resolutions available with the displays listed in [Table A.1](#) as well as the non-standard modes listed in [Table A.2](#).

Table A.1 Modes Supported for High Resolution Displays

| Display | Maximum Resolution | Hardware Requirements |
|---|---------------------|--|
| IBM T221 (Dual Link DVI) | 3840x2400 @ 48Hz | <ul style="list-style-type: none"> All High-end NVIDIA Quadro FX (see list of products in “NVIDIA Quadro FX Family of High End GPUs” on page 56.) |
| Apple 30” Cinema HD Display (Dual link DVI) | 2560x1600 @ 60Hz | <ul style="list-style-type: none"> All High-end NVIDIA Quadro FX (see list of products in “NVIDIA Quadro FX Family of High End GPUs” on page 56.) |

Table A.2 Non-standard Modes Supported

| Resolution |
|-------------|
| 1680 x 1050 |
| 1366 x 768 |

Default Modes Supported by GPU

This section lists the modes that are included by default in the driver INF for the supported products.

Understanding the Mode Format

Figure A.1 gives an example of how to read the mode information presented in this section.

| Example entry: | 1024 x 768 | 32 60 70 72 75 85 100 120 140 144 150 170 200 |

Meaning:

| | |
|----------------|--|
| Resolution: | 1024 x 768 |
| Color depth: | 32 bpp |
| Refresh rates: | 60 Hz, 70 Hz, 72 Hz, 75 Hz, 85 Hz, 100 Hz, 120 Hz, 140 Hz, 144 Hz, 150 Hz, 170 Hz, and 200 Hz |

Figure A.1 Mode Format

Note:

- Horizontal spanning modes of 3840x1080 and above, and vertical spanning modes of 1920x2160 and above generally require at least 32 MB of video memory at 32 bpp.
- An “i” next to the refresh rate indicates an interlaced refresh rate.
